Exercise 1 (E1) Due Tonight

• E1 due by 9:59pm Wednesday (Sept. 20^{th})
  • Exercises need to be completed \textit{individually}.

• Notes:
  • What should travel\_hours(50) return?
    • Always test for special cases!

  • In the trip\_distance function, note that we are assuming we are traveling for
    travel\_days days \textbf{AND} travel\_hours hours.
    • Also, there is no expectation that travel\_hours < 24 (although your code would not be
different even we assumed that).
