Welcome to CSC207H, an introduction to software design. The course introduces you to software design and development concepts and to professional tools such as a fully-featured IDE and a version control system. You will also learn Java, a statically-typed programming language. We will compare salient features of Python and Java, expecting you to fill in details outside of lecture, and we will investigate Java’s memory model, scoping facilities, and object-oriented structures in depth.

Course website: [http://www.teach.cs.toronto.edu/~csc207h/winter](http://www.teach.cs.toronto.edu/~csc207h/winter)

The website is required reading. It contains lecture notes, the policy on missed work, and more.

There is no required textbook in this course. All required readings will be posted on the course website, under the “Lectures” section.

The website will include a link to a discussion board that will be used to post tips, clarifications, and other important information. The Portal will be used to send announcements to you at whatever email address you have linked to it. You are responsible for all announcements made in lecture and on the Portal. All email sent to your UTOR account is also required reading.

For electronic communication, please use email from your UTOR address for personal issues and use the discussion forum to ask general course-related questions. For email, please include “207” in the subject line, always sign your full name, and include your UTORid. (This saves us a ton of time and gets you a faster response.)

The website contains a form that will allow you to send feedback anonymously to the instructor. We welcome your comments! (Please note that this really is anonymous, so please use email if you want us to be able to address personal concerns.)

All assignments will be submitted electronically. You are responsible for making sure your code runs on the Computer Science Teaching Laboratories (CSTL) computers. **All assignments will be compiled, run, and graded in the CSTL. If it doesn’t work there, you will receive a 0 on the correctness portion of the grade even if it works on your own computer.** Having technical problems such as a poor internet connection will not be accepted as an excuse for a late submission.

**You can submit assignments up to an hour late with no penalty.** You can submit up to 12 hours late with a 25% late penalty.

If you have an issue that prevents you from submitting on time, please contact your instructors immediately. In case of illness or other exceptional circumstances, proper documentation may be requested.
Labs
There are regularly-scheduled labs beginning the first week of the semester. All of the labs will take place in Bahen. Lab room assignments are posted on the course website. To receive a mark for participating in the lab, you must do the lab activity during lab time and sign the attendance sheet.

Teams
A1 and A2 must be done individually. Do not share your solution with another student, whether or not it works. Sharing your work with another student before the deadline is an academic offence. Don’t post your solution on the web, either! This includes websites like Pastebin and GitHub.

The Project will be completed in groups of 4 people. All Project group members must be registered in the same lecture section of CSC207H. If you have a friend you want to work with on the project, make sure you are registered in the same lecture section.

Test and Exam
There is one test that will take place during the week of February 5, during lab time, and one final exam. The exam date will be between April 9 and April 30.

Accessibility Needs
The University of Toronto is committed to accessibility. If you require accommodations or have any accessibility concerns, please visit http://www.accessibility.utoronto.ca as soon as possible.

Academic Offences
All of the work you submit must be done by you (or, for the Project, your partners), and your work must not be submitted by anyone else. Plagiarism is academic fraud and is taken very seriously. The department uses software that compares programs for evidence of similar code. Please read the Rules and Regulations from the U of T Calendar (especially the Code of Behaviour on Academic Matters):

http://www.artsandscience.utoronto.ca/ofr/calendar/rules.htm

Here are a couple of general guidelines to help you avoid plagiarism:

• Never copy another student’s coursework, whether it is on paper or on a computer. Never show another student your code, even if it’s on a computer screen.
• If you find code on the web that solves part or all of an assignment, don’t submit it! A large number of the academic offences in CS are between students who have never met, and who just happened to find the same solution online. If you find it, someone else will too.
• Please don’t post your solutions to the assignments on the web while the course is running.
