Text: **Picturing Programs**

Outline

what Von Neumann looks like

bottleneck.

1. LOAD A1 R1
2. LOAD A2 R2
3. ADD R1 R2 R3
4. STORE R3 A3
5. HALT

(define A3 (+ A1 A2))

where Von Neuman's going

There are some issues

▶ Von Neumann bottleneck

▶ mortality of Moore's Law

m

maybe
Q wantum
computing

limit
resolution
possible for
light's wave
length

photo lithography
and
heat

wave length

input, output

for geezers

What will be new human input/output,

lots of real estate to get ideas in, out doesn't fit in pocket

storage hard drive

storage

compact disc

plastic, metal wafer.

5¼" hard drive (CAV) MiniDisc (CAV) 8" floppy disk (CAV)

Omega Zip (CAV)

audio Compact Disc (CLV*)

Digital Versatile Disc (CLV*)

12" vinyl record (CAV)

LaserDisc (CLV/CAA/CAV)

heat,
humidity,
time

storage
flash drive

- solid state.

no
macroscopic
moving parts.

expensive
vs
hard drives.

promising
form
of
storage

similar to
transistors,
magnetic
faster than
storage.

bits, files, buffers
protect us from the machine

with meaningful names

combine fragmented.

machines take over in batches

Machines began to take over setting the program counter to a new job, collecting the output, fetching memory... but it was still one job at a time.

time sharing, version 0.1

one user, one program, one computer

task-switching to time-splitting, v 1.0

Does one task stop, or only appear to stop, for the other?

unix (mostly) to the desktop

GUIs, time-sharing, networking, flame-wars

an operating system should have

- ▶ kernel (shell, shielded access to hardware, referee sharing)

- ▶ utilities

Notes
