CSC104 winter 2013 Why and how of computing week 3

Danny Heap heap@cs.toronto.edu BA4270 (behind elevators) http://www.cdf.toronto.edu/~heap/104/W13/ 416-978-5899

Text: Picturing Programs

(日)、(四)、(日)、(日)、

э

how to solve it it being a new problem

Clearly there's no fool-proof method, but there's some techniques that often make progress. It helps to write down the whole process:

- Understand the problem
- Devise (one or more) plan(s)
- Try the plan
- Look back

# paper folding?

▶ Understand the problem (what's given, what's required)?

Devise a plan

▶ Try at least one plan (be ready to abandon it too)

Look back

# In media res

### Representing even simple information is hard. Let's race through this table:

| b7 — |                |         |         |         |         |                 | 0   | 0   | 0   | 0   | 1 | 1  | 1  | 1   |
|------|----------------|---------|---------|---------|---------|-----------------|-----|-----|-----|-----|---|----|----|-----|
| b    | _              |         |         |         |         | <b>→</b>        | 0   | 0   | 1   | 1   | 0 | 0  | 1  | 1   |
|      | b <sub>5</sub> |         |         |         | -       |                 | 0   | 1   | 0   | 1   | 0 | 1  | 0  | 1   |
| Bits | 5              | b₄<br>↓ | b₃<br>↓ | b₂<br>↓ | b₁<br>↓ | Column<br>Row J | 0   | 1   | 2   | 3   | 4 | 5  | 6  | 7   |

### Early devices

tally systems

Clay tablets, read-only when baked, read/write when sundried, havebeen in use for at least 5,000 years.

Abacuses, or abaci, have been in use for nearly as long

## Number systems and gears ancient world

Hindu-Arabic numbers: positional notation, and zero over 2000 years ago slick algorithms, e.g. long multiplication

Antikythera mechanism make us re-think ancient technical skills

• □ ▶ < 同 ▶ < 三</p>

#### Gears and rules

machine age

Add powers (logs) to multiply quickly, extract roots

Read the gears to extract taxes — Pascaline

#### Looms and engines

industrial revolution

Jacquard loom combined steam and punch cards for automatic patterns

Babbages difference engine would have evaluated polynomials like  $3x^3 + 5x^2 - 7x + 9$ 

• □ ▶ • 一回 ▶ • □ ■

#### gears, pins, and electricity digital and analog before tubes

data stored in punched cards manipulated by pins and electricity last for decades

analog computers model world using smoothly-varying quantities such as water

### programmable or electronic...

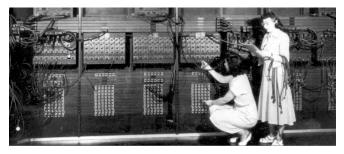

"programmable" (cards) but not electronic (relays) the Zuse Z1

electronic but not programmable dedicated to one calculation the Atanosoff-Berry

• □ ▶ • 一回 ▶ • □ ■

### when computers were women for a while

Eniac's first programmers were women known for clear-thinking, manual dexterity, and speed ...human labour was cheaper than computer cycles dozens of cubic metres, programmed by connecting pins

Image: A matrix

# stored programs, faster switches getting modern

the same memory for data and programs is now the typical design

tubes were big, hot, slow compared to transistors ... which just keep shrinking

# your (grand)parent's computer smaller, faster ...

perhaps thanks to sputnik the computing power of eniac fits in your hand by 1970

mass-produced desktops landed with a clunk by 1980s

#### Notes
