Useful structs

```

struct sigaction {
    void (*sa_handler)(int);
    sigset_t sa_mask;
    int sa_flags;
}
struct hostent {
    char *h_name; // name of host
    char **h_aliases; // alias list
    int h_addrtype; // host address type
    int h_length; // length of address
    char *h_addr; // address
}
struct sockaddr_in {
    sa_family.t sin_family;
    unsigned short int sin_port;
    struct in_addr sin_addr;
    unsigned char pad[8]; /*Unused*/
};
}

```

Shell comparison operators

Shell	Description
-d filename	Exists as a directory
-f filename	Exists as a regular file.
-r filename	Exists as a readable file
-w filename	Exists as a writable file.
-x filename	Exists as an executable file.
-z string	True if empty string
str1 = str2	True if str1 equals str2
str1 != str2	True if str1 not equal to str2
int1 -eq int2	True if int1 equals int2
-ne, -gt, -lt, -le	For numbers
!=, >, >=, <, <=	For strings
-a, -o	And, or.

Useful shell commands:

cat, cd, chmod, cp, cut, echo, expr, ls, mkdir, read, sort, uniq, set
ps aux - prints the list of currently running processes
grep (returns 0 if match is found, 1 if no match was found, and 2 if there was an error)
grep -v displays lines that do not match
wc (-clw options return the number of characters, lines, and words respectively)
diff (returns 0 if the files are the same, and 1 if the files differ)

\$0	Script name
\$#	Number of positional parameters
\$*	List of all positional parameters
\$?	Exit value of previously executed command

Useful Makefile variables:

\$@	target
\$^	list of prerequisites
\$<	first prerequisite
\$?	return code of last program executed
